Rahmawati S.Pd as Stakeholder

Introduction

Problem Background

- In the current day of modern technologies, many tasks and jobs have started to be done automatically throughout many fields of work.
- Many institutions have already made their sophisticated system that records and manage all of a student's data, but here in Aceh, Indonesia is still a step behind.
- One example of institution that still does not have a website to check/manage students' academic data is SMAS Muhammadiyah 1, a private high school located in Banda Aceh City, Indonesia.

Project Aim

- This project aims to create an effective solution to enable the institution to convert its manual student management system into a computerized system.
- Introduce the computerized system to students and teachers of SMAS Muhammadiyah
- Increase the efficiency of managing student's academic data

Objectives

The objectives of this project include:

- To identify the requirements of the student academic management system
- To design the student academic management system based on the Stakeholder's requirement
- To develop the student academic management system based on the Stakeholder's requirement
- To test the functionalities of the student academic management system according to stakeholder's requirement

Scopes

The scopes of this project are:

- This project only focused on the conversion of manually managing student data to a website that stores all of the student's data, which can be accessed by teachers, and students.
- SMAS Muhammadiyah 1 will provide the data that is needed for the system
- Users in this system are teachers, students, and admins of SMAS Muhammadiyah.

System Development Methodology

Methodology Choice and Justification

Agile methodology was chosen for several reasons:

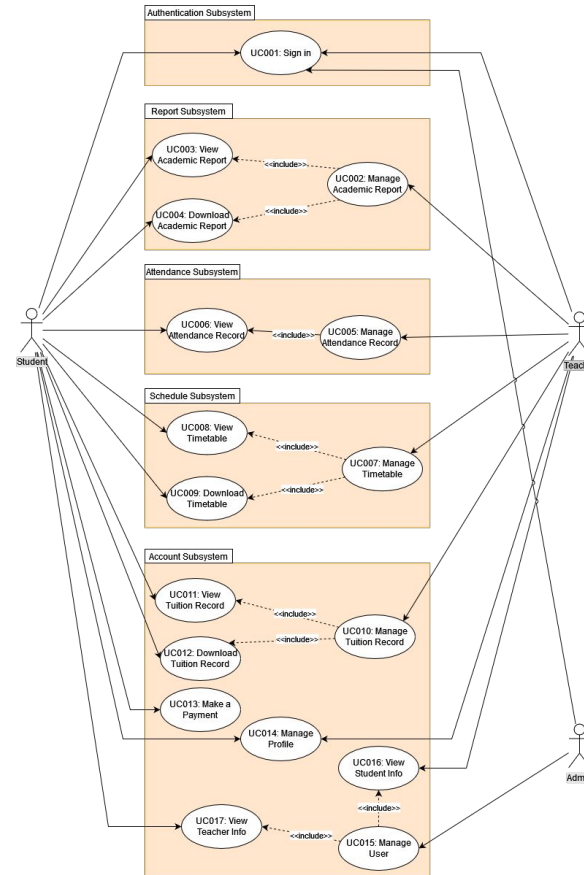

- Agile methodology is one of the most popular methodologies used in development nowadays.
- The Agile SDLC development approach emphasizes customer satisfaction, and development across several short cycles, or sprints, instead of a top-down process with a single set of steps
- In these sprints, a task or function of the system has to be done based on the time set. Because of this, the development will have a rapid delivery of the system since each sprint, there is something to show to the stakeholders.

Module	Report Module
Instruction	
1. Login with Teacher Account 2. Click “Penilaian” 3. Select the filter to view the desired student 4. Click the “Nilai” button 5. Input the required field 6. Click the “Save” button 7. Logout by clicking the top right menu and click “Keluar” button	
Expected Result	
1. Should be able to logged in as Teacher 2. Should be able to view the “Penilaian” Page 3. Should be able to view the desired student 4. Should be able to view the input mark page 5. Should be able to save the mark for the student 6. Should be able to logged out from the system	
Actual Result	
1. Successfully logged in as Teacher 2. Successfully view the “Penilaian” Page 3. Successfully view the desired student 4. Successfully view the input mark page 5. Successfully save the mark for the student 6. Successfully logged out from the system	

Conclusion

Conclusion

Achievement of Project Objectives

- The system has been successfully developed.
- The system also implements all the required function stated in PSM 1.
- The system has been implemented in a test environment such as User Acceptance Testing to ensure its proper functioning and fixing bugs as much as possible.

Conclusion

Suggestions for Future Improvement

- Integrated payment system for tuition payment, so that the payment system is more efficient and secure
- Integration with third party LMS (Learning Management System)
- Integration with email services such as notification.
